

NBS Will Showcase Integrated PCB Layout Services at PCB West

Leading EMS provider NBS (www.nbscorp.com) will showcase their advanced integrated PCB Layout Services September 14-16 at PCB West in Santa Clara, CA. The NBS team will be on hand at booth #21 to demonstrate how their globally located PCB layout centers are different from the norm.

In addition to utilizing the very latest technologies, including Cadence® Allegro® and Valor® Trilogly® to offer complete PCB layout services, NBS' veteran layout team interacts continuously and closed loop with the company's renowned assembly and test operations. This ensures that every design is the result of real world manufacturing expertise as well as the latest in PCB Layout technologies.

NBS Engineering VP Ian Glover explains, "The best technology on the market is not enough to guarantee the most effective board layout for a product. Our highly integrated processes make us better equipped to work with the most challenging layout issues, including high layer counts, advanced materials and component miniaturization technologies."

Founded in 1999 as a PCB layout specialist, NBS has maintained continuous growth since its inception. This trend is largely attributed to its unique business model that delivers leading-edge services in design engineering, manufacturing and test and verification to a large and diverse customer-base serving all industry segments and geographies. NBS' 2009 acquisition of CompServ enabled the company to expand the scope of its services to include advanced supply chain logistics, custom products sourcing and a wide array of test services.

ENDS
